Release day 30th November 2022

Improvements

- DSOF-22450 Implementation of Deltacast 8x channel capture card

We are now shipping new vx 4+ hardware with Deltacast capture cards. These can be identified within Designer in the following ways:

- Via the dropdown in the machine menu. The capture variant will be automatically selected as seen below:

- Via the available information in the d3manager "help" dropdown as "Capture Card Vendor". Within this view, we have also included machine type, serial number, backplane model, and VFC card load

We have also enabled any vx 4+ with Deltacast capture be identified in the following ways:

- A note on the vx 4+ label on the rear of the machine indicating Deltacast capture
- Via the OLED in the machine field. Deltacast is listed as (De)

It is important to note that Deltacast capture is unable to decode the following formats:

- 2K DCIpsf30
- 2K DCIpsf29.97
- 2K DCIpsf25
