

r29.1.2 Changelog

+-----+
| r29.1.2 Release - 198643 |
+-----+

Release day: October 9th 2024

Fixes

- DSOF-24905 - Setting the placeholder of a VideoIn to None will no longer retain the last placeholder image selected until a system reboot.
- DSOF-27970 - HDMI VFC cards will no longer occasionally be detected as DP 1.2.
- DSOF-28223 - Designer now displays a friendly warning instead of an Access Violation when arrowing from an Open Layer to a Metafield (min, max, step etc.).
- DSOF-28237 - Zoom & Focus data is now correctly captured in the shot recorder again.
- DSOF-28327 - Designer will no longer intermittently hang after boot or applying feed settings when in very noisy networks.
- DSOF-28336 - Custom OCIO configs which do not define the built-in transform to be sRGB now display correctly in the visualiser.
- DSOF-28372 - The SpinBitmap layer now correctly shows dynamic OCIO transform fields.
- DSOF-28389 - Actor status icons now show tooltips again.
- DSOF-28417 - Resolved an issue where d3 could crash to desktop during apply feeds or when in certain rare GPU states.
- DSOF-28437 - Designer will no longer log lots of errors to the console when entering the feed scene while colour management is set to Gamma space.
